

Letter of Attestation

June 22, 2022

To: Ameredev Operations
Attention: Luis Molina
Hansley Persad
Josh Hailes
SUBJECT: Amen Corner_Pilot Program H2S Removal

Testimonial – Ameredev Operating, LLC

“We engaged Alexandros, Inc. to conduct a comprehensive chemical pilot project for H₂S removal from our produced water streams at the Amen Corner Facility in June 2022. The goal was to test and evaluate effective chemical solutions to significantly reduce or eliminate H₂S contaminants in our production operations.

Alexandros, Inc. delivered a well-organized, safety-focused operation from start to finish. They supplied specialized injection equipment, coordinated all necessary line taps and isolations, and implemented strict monitoring protocols—including frequent sampling every 5 minutes initially, then at 30-minute intervals—with detailed logging of results. Their team ensured full compliance with our safety requirements in a high-H₂S environment, conducted oxygen-level testing, leak inspections, and maintained clear communication through pre-start meetings, 6-hour briefings, and a final project close-out review.

The pilot was executed professionally, with strong emphasis on personnel safety, environmental protection, and minimizing operational disruption to ongoing production and trucking activities. Alexandros, Inc. demonstrated excellent project management, technical knowledge, and a commitment to working collaboratively with our operations team, including Luis Molina, Hansley Persad, and Josh Hailes.

We appreciated their proactive approach, attention to detail, and clear documentation throughout the multi-day effort. This pilot provided us with valuable data to assess next steps for potential permanent implementation.

We would not hesitate to recommend Alexandros, Inc. for H₂S treatment and chemical application projects in challenging sour service environments.”
